Advanced technology

- Own technology for waste collection and street cleansing
- Leaders in waste recycling and energy recovery systems
- Experts in providing solutions at all stages of the water management cycle for all uses: human, agricultural and industry, meeting the needs of institutions and public and private organizations
- Specialists in bridges and ports with a high technical complexity
- Innovative processes for high speed lines, metro and tunnels
- Specialists in turnkey projects in the industrial sector

Comprehensive range of services throughout the whole value chain

Advanced technology and integrated range of products and services with high added value in all of its business areas

FCC Group

1.7. Value creation

Our incumbent position enhances our ability to benefit from the strong fundamentals of our core business areas

Environment

- Positive long-term outlook due to regulatory developments and environmental considerations
 - EU Waste Framework Directive requires member states to recycle at least 55% of their municipal solid waste by 2025 and 65% by 2035 plus landfilling down 10% also in 2035
- New opportunities offered by expected reforms in Spain on recycling and composting (2023)
- Expansion potential in existing platforms: USA, UK and some Central European countries

Water

- Positive long-term outlook due to regulatory developments and environmental considerations and water infrastructure gap
- Take advantage of the extensive experience in the integral water cycle management, to apply in business opportunities in countries with low PPP activity
- Growth potential in Europe and selectively in America and MENA

Construction & Cement

- Continued infrastructure gap in selected jurisdictions. Stringent management of cash flow generation and third-party risk
- Potential growth in Spain linked to clean energy, efficiency and related facilities.

Real Estate

- Combined recurring rental income with property asset build to rent) and residential housing development in high demanded areas

FCC Group

1.7. Value creation

Experience
More than 120 years
creating value for citizens

Internationalization
Operating in over 30 countries

Innovation and technological capacity
More than 13.5 million euros in R&D and innovation and in advances to optimize efficiency, address digital challenges and promote practical sustainable solutions

Professionalism
Over 67,000 professionals
specialising in different areas

Protecting the Environment
More than €100,5 M for the prevention of environmental risks
Environmental management systems certified according to **UNE-EN ISO 14001** in all business areas

Quality
Quality management systems certified according to **UNE-EN ISO 9001** in all business areas

Local development commitment
Over €5,5 M allocated to
Projects for local development in 2022

Health and Safety
Occupational health and safety management systems certified according to **ISO 45001** in all business areas

Shareholding Structure*

Composition of the Board

11 members:

- 8 proprietary directors
- 2 independent members
- 1 executive director

Audit and Remuneration Board Commissions:

- Chaired by independent members
- Majority of independent members

100% self-rechargeable electric RCV
Madrid

Smart recharging stations
Barcelona

50 years developing electric mobility

FCC Medio Ambiente has been developing electric mobility technology for 50 years and implementing it in its Municipal Service vehicles, both light and heavy-goods sizes. Today it has a fleet in constant growth of 3,645 sustainable vehicles, among which 1,579 are electric and self-rechargeable electric, 127 hybrid-electric and 1,939 CNG (including bi-power: CNG plus petrol) .

Electric compact RCV Toledo 1985

FCC Medio Ambiente

2.8. Committed to innovation

e-mobility: The future of Urban Services is Today

FCC Medio Ambiente developed the **first industrial e-mobility Chassis-platform for Urban Services**, an actual **breakthrough** to achieve smarter and more sustainable cities:

- ✓ **Versatile:** adjustable to every functionality in urban services and every Power requirement
- ✓ **Efficient:** Range and performance equal to any combustion vehicle, with a 50% lower energy consumption
- ✓ **Zero Emission Vehicle – Great Carbon footprint reduction**
- ✓ **Circular:** 100% Recycling Components and extended lifespan

New e-mobility Platform for Urban Service Vehicles

- Awarded at the **Smart City Awards 2019** at SCEWC in the 'Innovative Idea' category.
- Awarded at the **2019/2020 European Business Awards for the Environment (EBAE Awards)** in the products & services category.
- Awarded with the **Ecological Industrial Vehicle of the Year 2021** in the mixed category, at the National Transport Awards.

FCC Medio Ambiente

2.8. Committed to innovation

H2TRUCK Project

Research and Development of a New Heavy-Duty Vehicle for Urban Service Applications with Battery-Hydrogen Fuel Cell Hybrid Technology

- heavy-duty chassis-platform with 100%-electric propulsion
- powered by a hydrogen cell and lithium-ion battery hybrid system that is completely environmentally friendly
- this hybrid chassis can be applied to any equipment or machine that provides urban services, regardless of the number and layout of axles or the bodywork installed on it

PLAUSU Project

Autonomous Platform for Urban Services (PLAUSU). Research and development of automation technologies focused on the operation in autonomous mode of a platform for urban service platform for cleaning tasks.

- 100%-electric chassis-platform
- dual wash down-sweeper vehicle
- Remote control, GPS positioning and perception by LiDAR

FCC Medio Ambiente

2.8. Committed to innovation

Circular Economy projects

Recovery of critical raw materials from Municipal Solid Waste (MSW)

MINETHIC: Promoting the recovery and valorisation of strategic mineral resources for the green transition. The main objective is the investigation of new sources of non-conventional raw materials, both industrial and urban, covering the whole value chain. New technologies will be investigated to recover and valorise Critical Raw Materials (CRM) from mineral resources, by-products and waste streams, as well as the integration of digital technologies, promoting a sustainable, efficient and local supply of CRM.

FCC Medio Ambiente will extract the phosphorus, nickel and cobalt present in the slag from the incineration of municipal solid waste and the phosphorus from the biostabilised material obtained from the biological treatment of organic matter from mixed municipal solid waste.

Recovery of slag from MSW incineration

ECO2D4.0: Development of comprehensive road surface solutions using priority waste from the Basque Country, and ecosystem for the functional and environmental monitoring of road infrastructures. Project co-financed by the HAZITEK 2022 - Business R&D support programme of the Basque Country, in Spain, in which FCC Medio Ambiente participates and whose objective is to investigate new applications for waste management, in particular those cases where there are few ways of recovery, such as ferrosite, incineration slag and foundry sands, although milling waste and black slag are also included.

RSU4HOM: Development of new construction products from the valorisation of municipal solid waste incineration slags. Led by FCC Medio Ambiente and co-financed by the HAZITEK 2022 - Basque Country Business. It aims to minimise the environmental impact generated by the landfilling of incineration slag from two plants in Zubieta (Gipuzkoa, Spain). The aim is to recover this waste and integrate it as aggregates for the manufacture of construction materials (concrete, mortar and precast concrete).

FCC Medio Ambiente

2.8. Committed to innovation

Circular Economy projects

Green fuels

Nuevos materiales, tecnologías y procesos para la generación, almacenamiento, transporte e integración de hidrógeno renovable y biometano a partir de biorresiduos (2021-2024). MIG-20211071. FCC Medio Ambiente carried out research in the laboratories of the University of Valladolid (Spain) with the aim of studying the dark fermentation process using Organic Fraction of Municipal Solid Waste (OFMSW) as a substrate. As a result, a significant amount of hydrogen was obtained out of the total biogas derived in each fermentation.

Green fuels

LIFE LANDFILL BIOFUEL (LIFE18 ENV/ES/000256: Integral management of the biogas from landfills for use as vehicle fuel). During 2023, different tests were conducted with the biomethane generated, verifying that all of them comply with current regulations. Likewise, this year, light and heavy-duty vehicles have travelled over 30,000 and almost 40,000 kilometres respectively with the biomethane produced from landfill biogas.

Plastic recycling

LIFE ZEROLANDFILLING (LIFE-2022-SAP-ENV 101114213: Recovering landfill waste through an innovative and integrated process committed to circular economy). The LIFE project, led by FCC Medio Ambiente, addresses the increase in urban waste generation through an innovative system for the management and recovery of nonrecyclable waste, mainly plastics and bio-waste. It promises a sustainable zero landfill solution, low carbon footprint and circular economy, with environmental and economic impact in Europe.

Plastic recycling

PLASMIX (LIFE18 ENV/ES/000045: Plastic Mix Recovery and PP& PS Recycling from Municipal Solid Waste) (2019-2022). This project, led by FCC Medio Ambiente, is aimed at demonstrating the material recovery of Plastic Mix from municipal waste (PP, PS and EPS) in a semi-industrial plant located at the Ecccetral plant, Granada (Spain)

FCC Medio Ambiente

2.8. Committed to innovation

Circular Economy projects

Reciclaje de plásticos

Life⁴ film

LIFE4FILM (LIFE17 ENV/ES/000229: Post-consumption film plastic recycling from municipal solid waste). LIFE project led by FCC Medio Ambiente with the aim of avoiding sending plastic film (LDPE) present in urban waste to landfill or energy recovery through the implementation of innovative recycling on a semi-industrial scale.

By-products and biomaterials

LUCRA
BIO SUCCINIC ACID

LUCRA (101112452 – HORIZON-JU-CBE-2022): Sustainable sUCCinic acid production using an integrated electrochemical bioreactor and renewable feedstock. The project proposes innovative technology for the electrochemical extraction of succinic acid through the circular use of the aforementioned resources, which greatly reduces the dependence on fossil resources by developing a sustainable route for the production of succinic acid.

Subproductos y biomateriales

BIOPROLIGNO (CPP2022-009647: Transformation of lignocellulosic waste into bioproducts for their application in infrastructure and ground maintenance. Funded by the Spanish State Research Agency under the 2023 Public-Private Partnership programme, aims to develop experiences in the field of lignocellulosic waste pyrolysis, where three state-of-the-art bioproducts are generated: wood vinegar, charcoal and biochar.

By-products and biomaterials

DEEP
PURPLE

DEEP PURPLE (Domestic extraction of emerging products with purple phototrophic bacteria). The project proposes a synergistic and integrated treatment for the valorisation of three types of bio-waste: the organic fraction of municipal solid waste, sludges from wastewater treatment plants (WWTP) and urban wastewater, by means of a multi-platform photo-biorefinery based on phototrophic purple bacteria.

FCC Medio Ambiente

2.8. Committed to innovation

Circular Economy projects

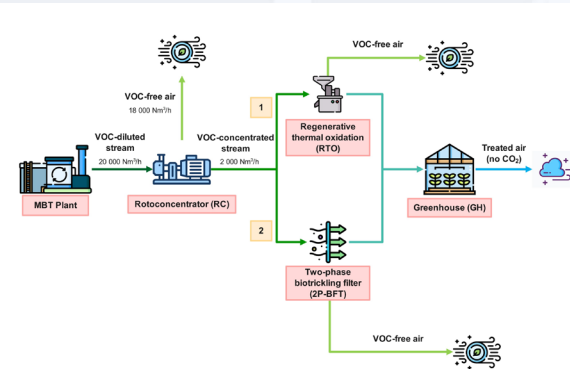

Mitigation of environmental impact

LIFE ABATE (LIFE-2022-SAP-ENV 101113838): Marketable high performance compact technologies for the abatement of VOCs in EU waste treatment plants, decreasing CO₂ emissions and energy consumption. The LIFE ABATE project, partially funded by the LIFE programme, aims to improve the sustainability of mechanical biological waste treatment (MBT) plants by demonstrating the benefits of innovative technology to reduce emissions of non-methane volatile organic compounds (NMVOCs) and CO₂.

This process includes a VOC concentration stage using the concentrator followed by biological or thermal degradation, reducing emissions of NMVOCs and odours, lowering energy consumption and using the emitted CO₂ to promote the growth of crops in greenhouse agriculture.

The ultimate goal of the project is to reduce NMVOC and CO₂ emissions, improving human and ecosystem health and well-being, with a lower energy consumption in comparison to current systems. The solution will be validated on an industrial scale at Ecoparc 3 Barcelona (Spain) and replicated at the Las Dehesas Biomethanisation plant in Madrid (Spain). In 2023, the partners visited these facilities to determine the optimal location for the prototypes.

FCC Medio Ambiente

2.9. Committed to inclusion

FCC Equal employees. Park Vandel team in Madrid

FCC Equal

- FCC Equal is a **Special Employment Centre** whose aim is the **social and labour integration and training of people with disabilities**, as well as the improvement of their health and safety conditions.
- It also seeks to provide them with skills, abilities and competencies for their professional development in the company.
- Along last year:
 - 219 job offers
 - 1423 analyzed candidates
 - 439 insert people
- Nowadays, all this work is driven through the **Fundación Incorpora**
